Revalidate

## Notes and Potential Issues

The following notes and warnings highlight missing or conflicting information which caused the validator to perform some guesswork prior to validation, or other things affecting the output below. If the guess or fallback is incorrect, it could make validation results entirely incoherent. It is *highly recommended* to check these potential issues, and, if necessary, fix them and re-validate the document.

### Using Direct Input mode: UTF-8 character encoding assumed

Unlike the “by URI” and “by File Upload” modes, the “Direct Input” mode of the validator provides validated content in the form of characters pasted or typed in the validator's form field. This will automatically make the data UTF-8, and therefore the validator does not need to determine the character encoding of your document, and will ignore any charset information specified.

If you notice a discrepancy in detected character encoding between the “Direct Input” mode and other validator modes, this is likely to be the reason. It is neither a bug in the validator, nor in your document.

## Validation Output: 4 Errors

### Line 8, Column 9: required attribute "type" not specified

`<style>`

The attribute given above is required for an element that you've used, but you have omitted it. For instance, in most HTML and XHTML

document types the "type" attribute is required on the "script" element and the "alt" attribute is required for the "img" element.

Typical values for type are type="text/css" for <style> and type="text/javascript" for <script>.

 **Line 38, Column 1: character data is not allowed here**

(Questa pagina contiene errori - tra gli errori c'e' anche la presenza di quest...

You have used character data somewhere it is not permitted to appear. Mistakes that can cause this error include:

- putting text directly in the body of the document without wrapping it in a container element (such as a <p>aragraph</p>), or
- forgetting to quote an attribute value (where characters such as "%" and "/" are common, but cannot appear without surrounding quotes), or
- using XHTML-style self-closing tags (such as <meta ... />) in HTML 4.01 or earlier. To fix, remove the extra slash ('/') character. For more information about the reasons for this, see [Empty elements in SGML, HTML, XML, and XHTML](#).

 **Line 41, Column 2: character data is not allowed here**

a nche h1 e' block-level ma questo testo non dovrebbe stare qui ... (vedi html)

You have used character data somewhere it is not permitted to appear. Mistakes that can cause this error include:

- putting text directly in the body of the document without wrapping it in a container element (such as a <p>aragraph</p>), or
- forgetting to quote an attribute value (where characters such as "%" and "/" are common, but cannot appear without surrounding quotes), or
- using XHTML-style self-closing tags (such as <meta ... />) in HTML 4.01 or earlier. To fix, remove the extra slash ('/') character. For more information about the reasons for this, see [Empty elements in SGML, HTML, XML, and XHTML](#).

 **Line 74, Column 11: an attribute value specification must be an attribute value literal unless SHORTTAG YES is specified**

<p class=s postato>The End.</p>
